

Press Release:

Katana Summit, LLC, a company specializing in the manufacturing of wind towers, recently achieved ISO 9001:2008 certification at its Columbus Nebraska location. Katana Summit's goal to produce outstanding quality in the manufacturing of wind towers was reinforced with the recent registration of its Quality Management System under ISO 9001:2008. Registration was completed by HSB registration services, a division of Hartford Steam Boiler Inspection and Insurance Company of Connecticut.

ISO 9001:2008 certification has been Katana's objective since shortly after beginning production at the Nebraska facility in the summer of 2008. With full management support and hard work at all levels, this 400 tower capacity facility achieved ISO 9001:2008 registration following a full 7 day review of all quality management system processes in July of 2010.

Katana Summit's commitment to quality, continuous improvement, and most importantly, customer satisfaction were the key components in its successful completion of ISO 9001:2008 registration. Katana Summit, a joint venture between Katana Industries and the Sumitomo Corporation of America, has locations in the Pacific Northwest at Ephrata Washington and in the wind belt of the Central Plains at the Columbus Nebraska facility.
